Published May 2020

The conclusions in this report are those of BHI and no official endorsement by the NSW Minister for Health, the NSW Ministry of Health or any other NSW public health organisation is intended or should be inferred.

Background

In late 2019, the Bureau of Health Information (BHI) reviewed the Adult Admitted Patient Survey (AAPS) 2019 questionnaire to inform any content changes required for the 2020 questionnaire. BHI reviews recurrent surveys before they are repeated to ensure the questionnaire is still appropriate for the NSW context and all questions remain optimal.

As part of the NSW Patient Survey Program Strategy (2019–22), BHI is undertaking reform of the survey program, beginning with the emergency department patient survey. As well as addressing timeliness and usefulness of results, BHI will undertake work aimed at improving response rates to the survey. This work will include investigation of email and SMS for contacting patients, as well as review of survey promotion, cover letters and the online tools.

Due to this significant reform, it was decided that no changes to the 2019 questionnaire were required for 2020. Instead, this reform will direct changes to be implemented in AAPS 2021.

Please refer to the 2013–2019 AAPS development reports available at bhi.nsw.gov.au for information about how those questionnaires were developed. These reports include details such as stakeholder consultation and engagement, questionnaire development, sampling methodology and additional development notes.

Method

Due to significant methodological reform currently underway for the NSW Patient Survey Program, BHI did not undertake a review of AAPS 2019 data for the purposes of making updates to the 2020 survey questionnaire.

The 2019 questionnaire was reproduced for 2020 and this questionnaire was reviewed and approved by BHI's Chief Executive.

Overview of changes

No content changes were made to the 2019 AAPS questionnaire for 2020.
