Sydney LHD: COPD hospitalisations and associated bed days among adults with COPD July 2009 to June 2010

Percentage of adults with COPD by number of hospitalisations (4,167 bed days)

- 1. Adults resident in the LHD admitted into any NSW hospital (excluding Albury Base Hospital) between July 2005 and June 2009, with COPD listed in the first 20 diagnostic codes were analysed for hospitalisations in 2009–10.
- 2. Episodes of care for which COPD was coded as the principal diagnosis (ICD codes are listed on page 26). If two episodes of care with primary diagnosis of COPD were separated only by a type change separation or a transfer, then these two episodes were treated as one hospitalisation. Excludes hospitalisations for dialysis.
- 3. Only Principal Referral, B Metropolitan and B Non-Metropolitan hospital results are tabulated. All other public hospitals in the LHD are included in 'Other'. For private hospital data, see Chronic Disease Care: Another piece of the picture.
- 4. Discharges followed by unplanned readmissions for COPD to any NSW hospital within 28 days, per 100 total COPD principal diagnosis hospitalisations.
- 5. Rate per 100 discharges standardised for age and sex.
- 6. Percentage of hospitalisations with DRG code catastrophic or severe comorbidities or complications.
- 7. Percentage of hospitalisations that were for adults living in the most socioeconomically disadvantaged quintile.
- (*) Suppressed due to small numbers or relative standard error \geq 40%.
- (†) Interpret with caution: relative standard error ≥30% and <40%.

n/a Not applicable because there were no readmissions.

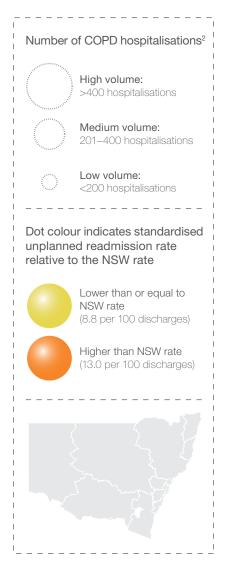

Note: 512 of the adults alive at the end of 2009–10 had both COPD and CHF.
